SMALL GESTURES PLANET EARTH

RECYCLE PHASES

The basic phase of recycle is collection of waste materials and manufacture process into new usable and beneficial materials. Used accumulator can be beneficial to generate electricity for short term when blackout happens.

REUSED WASTE

Waste product collection is a prime step in reducing waste. The collected waste product can be reused for similar function or alternative purpose. For instance, domestic soap from fruit peels. Citrus fruits are rich of ascorbic acid (Vitamin C).

SAVE ENERGY

Energy is defined as the ability to do work - which, for biology purposes, can be thought of as the ability to cause some kind of change. Energy can take many different forms: for instance, we're all familiar with light, heat, and electrical energy.

SAVE WATER

Water is a material that exists in gaseous, liquid, and solid phases and is made up of the chemical elements hydrogen and oxygen. One of the most prevalent and necessary substances is it. It is a colourless, odourless liquid at room temperature with the crucial property of dissolving several other compounds.

SPECIAL THANKS TO COMMUNITIES OF SMK TRUSAN, FELLOW TEACHERS, AND STUDENTS FOR THE CONTINUOUS SUPPORT.
