

Why Do We Need More Trees?

written by Saarani Vengadesen | 14/02/2021

One tree can absorb one tonne of carbon dioxide by the time it is 40 years old. Trees are crucial for combatting climate change by [absorbing](#) carbon dioxide, [purifying](#) the air, and [stabilising](#) the soil. They provide habitats for diverse wildlife, offer shade, and enhance the beauty of landscapes. Increasing tree coverage is essential for a sustainable and healthier planet.
